

# ***Executive Summary: Employee Retention Strategy***

## **Objective**

The goal of this analysis was to identify the primary factors driving employee attrition and to provide actionable recommendations to improve retention across the organization.

## **Key Findings**

- **Primary Drivers of Attrition:** Our analysis indicates that the three factors most strongly linked to employees choosing to leave are [insert Factor 1], [insert Factor 2], and [insert Factor 3].
- **High-Risk Areas:** We have identified that employees in the [insert Department/Job Role] are at a higher risk of turnover compared to other areas of the business.
- **Tenure Observations:** Data shows that employees typically reach a "turning point" at [insert number] years of service, where the likelihood of attrition significantly increases.

## **Business Recommendations**

- **Targeted Retention Conversations:** HR should proactively initiate retention conversations with employees in the [insert high-risk role] who are approaching the [insert number]-year tenure mark.
- **Compensation Review:** Based on our findings, [insert either "salary is a primary driver" or "non-monetary factors like work-life balance are more significant"], suggesting that we should prioritize [insert specific policy change, e.g., flexible hours or competitive salary adjustments] to better support our workforce.

## **Model Limitations**

While this analysis provides strong indicators based on historical data, it is important to note that the model does not capture qualitative aspects such as individual personal circumstances, team culture, or management quality, which are also vital to understanding employee sentiment.
